The products introduced in this catalog are all covered by the ISO 9001 Certification awarded to KITZ Corporation in 1989, the earliest in the valve industry.

What is Ductile Iron ?

Gray iron, ductile iron, and malleable iron are the three kinds of iron used for valve construction. Unlike gray iron, which has thin, flake-like molecular formations, the metallic structures of both ductile and malleable iron contain nodular graphite. (Refer to the microscopic views shown here.) This structure provides ductile and malleable iron with mechanical properties that exceed those of gray iron. It almost equals the properties of cast steel, which is an expensive material for industrial valves. Furthermore, their superior castability and machinability help to increase their suitability as a valve material.

Ductile iron outperforms malleable iron due to its better mechanical characteristics to build a valve body, which is a kind of pressure containing device. For example, it has a 20% higher tensile strength and 70-80% better elongation. This difference comes from different formation processes of nodulated graphite molecules.

KITZ ductile iron valves are made of JIS FCD-S or ASTM A395 ductile iron. The history of the introduction of ductile iron valves on the market is rather short; however, the demand is steadily increasing as a result of their economic advantage as well as the fact that their wide range of service applications is comparable with cast steel valves.

This catalog serves to provide design specifications, materials of construction, and external dimensions of the following ductile iron valves and strainers manufactured by KITZ Corporation :

- JIS 10K, 16K, & 20K Gate, Globe, & Check Valves
- JIS 10K & 20K Ball Valves
- JIS 10K, 16K, & 20K Strainers
- ASME 150 & 300 Gate, Globe, & Check Valves

Service Recommendation

For higher mechanical shock resistance under high or low temperature, and better tensile strength and elongation characteristics than those of ordinary gray iron valves, ductile iron valves are highly recommended for the following services, sometimes, in place of cast steel valves :

- Piping for steam supply
- Air conditioning and heating systems
- High-pressure gaseous service in general
- Piping for poisonous gas service

The range of high-pressure gaseous service for iron valves is specified by the Ministry of Economy, Trade and Industry of Japan as follows :

Valve material	Poisonous gas*	Inflammable gas	Other gas
Ductile iron (JIS FCD-S)	2.4MPa maximum -5°C to +350°C		
Ductile iron (JIS FCD400)	not recommended	1.6MPa maximum 0°C to +250°C	
Gray iron (JIS FC200)	not recommended		0.2MPa max. 0°C to +250°C

*Phosgene and hydrogen cyanide are excluded.

Material Specifications of JIS FCD-S

1. Chemical composities :

Carbon	: 3.00% minimum
Phosphor	: 0.08% maximum
Silicon	: 2.50% maximum; however, 0.08% may be added for every decrease of 0.01% phosphor within the total maximum of 2.75%

2. Mechanical properties :

Tensile strength	: 412N/mm ² minimum
Yield strength	: 275N/mm ² minimum
Elongation	: 18% minimum
Brinell hardness	: 143-187
Charpy impact value :	
a) for ambient temperature service ;	17N·m/cm ² minimum in average of 3 test pieces.
	15N·m/cm ² minimum for the lowest impact value.
b) for -10°C or lower temperature service ;	15.3N·m/cm ² minimum in average of 3 test pieces.
	13.3N·m/cm ² minimum for the lowest impact value.

- Use for lubricating or hydraulic oil is acceptable. Contact KITZ Corporation for technical advice, if valves are used as heat transfer media.

- Employment of copper cap prohibits use of this valve for ammonia or amine chemicals.

- Bolting materials will be changed for servicing high temperature exceeding 225°C. Contact KITZ Corporation for detailed information.

- A gasket will be used for sealing the plug for application to high temperature exceeding 260°C. Specify your service temperature in advance. Ensure replacement of plug gaskets on your valve maintenance.
